## Improve Fuel Economy by up to 7% and Gain 35 HP with Edge's New Mileage Max

**OGDEN, UT** — Edge Products is proud to introduce the new Mileage Max module for 1998.5-2007 Dodge Cummins pickups. This simple plug-n-play module installs in less than 10 minutes, has proven gains in fuel economy of up to 7%, and delivers a boost of up to 35 extra horsepower.

The Mileage Max installs under the hood in minutes. With no buttons to push, switches to flip or monitoring required, the Mileage Max module was designed for the everyday customer who uses their truck for anything from daily driving to cross-country hauling. With proven gains in fuel economy, the Mileage Max takes the bite out of high fuel costs. Put simply: the more one drives, the more one saves.

### Testing Procedure:

Mileage Max was developed and tested by Edge engineers using a Mustang dynamometer to duplicate typical driving conditions. Both input and return fuel lines from the test truck were run into a separate tank containing a known quantity of fuel placed on an extremely accurate digital scale. With the truck fully warmed, the truck's cruise control was set to 70 MPH in overdrive and a constant load applied to simulate highway loads. The weight of the consumed fuel was then subtracted from the original weight and converted into MPG.

Repeated test results showed the Mileage Max consistently delivered up to a 7% improvement in fuel economy (depending on year and model of the vehicle) and an increase of up to 35 horsepower. In order to ensure accuracy, several tests were performed and an average made with and without the Mileage Max using the same conditions on the same dyno. For a more detailed description of the procedure, visit [www.edgeproducts.com](http://www.edgeproducts.com).

The Mileage Max (Part #30400 for the 98.5-00 Dodge; part #30401 for 01-02 Dodges; part #30403 for 03-04 Dodges; and part #30404 for 04.5-07 Dodges) retails for \$349.

Edge Products manufactures a full line of plug-in modules, programmers, and in-cab controllers for all popular late-model domestic trucks and Jeeps.
