## Edge Products Announces Version 2.0 Evolution CS and CTS Programmers for GM and Ford Trucks and SUVs

**OGDEN, UT** — From the company that was first to introduce the in-cab digital gauge tuning device and improve on it with the recent release of the first full Color Screen (CS) and Color Touch Screen (CTS) programmers, Edge Products proudly announces the release of Evolution software version 2.0 (V2.0) for the Evolution CS and CTS. This new software release expands the coverage of these two blockbuster products to all Ford diesel Powerstroke trucks from 1994-2009 and all Ford F-150s from 1997 to 2008 along with General Motors 1999-2009 V8 gas powered trucks and SUV's with "classic" or "new" body styles and 2001-2009 Duramax Diesels! In addition to expanded coverage, V2.0 includes the all-new Edge MyStyle software that allows users to create or load any custom image of their choice as the background screen on their Evolution CS or CTS. Now consumers can customize their product to suit their exact mood and style. V2.0 also allows users to customize their gauge arc colors to match their new custom background images!

The reception of Evolution CS and CTS products in the marketplace has been incredible. Users are recognizing that Edge Products is delivering the power, style and control they've been looking for in a performance programmer. The Edge Evolution CS and CTS products represent the most advanced technology in engine tuning available today and they just got better!

Evolution CS and CTS programmers offer the same great features and benefits users have come to expect from Edge Products along with a whole host of additional features. The Evolution CS and CTS come packed in new-style ruggedized cases with a universal system for window mounting (included) or custom pod mounting (accessories available from Edge) for that "from the factory" look. The Evolution CS and CTS programmers not only re-program the vehicle to improve power and performance but also double as gauge-display devices providing vital information about the performance of the newly tuned vehicle and can also act as scan tools for reading and clearing trouble codes.

The Evolution CS and CTS products connect directly into the vehicle's computer via the OBDII/diagnostic port and can read and display up to 8 parameters at a time from a list of dozens of engine parameters! CS and CTS displays can be easily changed and configured to allow each user to view the data most important to him or her. Safety features with user-defined audible alerts as well as performance test features such as 0-60 and quarter-mile times are included. Both systems include light sensitivity meters that automatically adjust screen brightness for improved viewing for day or night driving.

The CS model features a full-color, high-resolution 2.4-inch, button-controlled screen. The CTS model is a full-color, high-resolution 4.3-inch touch screen that comes equipped with a video-in port allowing users to connect to Edge's state-of-the-art backup camera (sold separately including night vision and locking license plate mount!) or any compatible off-the-shelf backup camera or DVD player.

Both models are designed to work in conjunction with the all-new Edge Accessory System (EAS) which allows users to connect multiple future accessories to the product such as additional exhaust gas temperature (EGT) sensors with many more accessories to come in the future!

The Evolution CS and CTS programmers are an all-in-one tool — scan tool, programmer, and gauges — making it the ultimate threesome. At a starting street price of \$439.00, they are priced as the absolute best value for a premium tuning product on the market today.

To learn more about the Evolution CS and CTS and to view an up to date list of all vehicles for which the Evolution CS and CTS products are available go to [www.tuneyourtruck.com](http://www.tuneyourtruck.com)

Edge Products manufactures a full line of plug-in modules, programmers, and in-cab controllers for all popular late-model domestic trucks, SUVs and Jeeps.
